

# Secure Team Collaboration

Symphony is the only cloud-based collaboration solution that combines end-to-end encryption, borderless external and internal communication, and enterprise-class administration into one extensible platform.

## SECURE

The only cloud-based collaboration platform secured with customer-owned encryption keys that also provides contextual content from multiple sources such as apps, wall posts, files and news feeds.

## COMPLETE

A platform with all of the modern communication features users have come to expect—chat, images, files, voice, video, and screen sharing in an easy to use and elegant experience.

## MOBILE

Our mobile apps are enterprise-ready and synced with desktop and browser versions in real time—giving your modern workforce the access and flexibility they need to stay updated while on the go.

powered by **aws**

We chose Symphony after a serious consideration of building an in-house platform or adopting solutions like Slack.

Max Nam-Storm | Global Chief Information Officer, CLSA

## BORDERLESS COLLABORATION

Our centralized directory makes it easy to discover and communicate with colleagues inside and outside your company. The directory uniquely enables encrypted, secure communication with colleagues, customers, partners, and suppliers.

## DATA OWNERSHIP

Unlike others, we cannot scrape your data. Symphony Enterprise Tier offer is uniquely architected to ensure you own your data, even for cross-company communication—enabled by customer-owned encryption key infrastructure.

## EXTENSIBILITY

Symphony's open APIs securely connect thousands of workflows and systems in the most demanding customer environments; reference integrations with Salesforce, JIRA, GitHub and other enterprise applications accelerate your time to value.

## ENTERPRISE MANAGEMENT

Symphony's centralized, web-based administration and compliance portal simplifies the provisioning and management of users, apps and bots. Global, round-the-clock support option is available at a very attractive price.

## ENTERPRISE DNA

Symphony works with all the most common enterprise tools and infrastructure. Use your existing directory, archiving, and compliance tools. Manage Symphony's mobile apps with your existing Mobile Device Management (MDM) or Enterprise Mobility Management (EMM) solutions.
